

How To: Adjust xenons for driving in europe

Courtesy of **Fireftr**

There is no electronic means of doing this.

A small sticker/reflector needs to be placed over part of the headlamp unit to deflect the light in the correction direction.

This can be purchased from many places:

Go to <http://www.realoem.com> and look in LIGHTING > HEADLIGHT for this part:

02 SET MASKING FOIL FOR HEADLAMP, XENON 1 63120398980 See EBA 0399038

and request the part from BMW

Or the reflector you can buy at the tunnel/ferry is far better, alot smaller, almost clear to look at and does the job perfectly, also only cost £4.99 for two
