

How To: drive without your key inserted

Courtesy of **Fieldmarshall**

I found this feature/bug by accident, but it seems to work. However I don't know what it could be good for...

1. Get in the car and close the driver's door
2. Insert key & Start engine (press the clutch pedal, push the Start/Stop button)
3. Stop the Engine (Start/Stop button)
4. Remove your key
5. Push the Start/Stop engine, your engine will start (if you didn't open any door)
